WARNING: Do not add or remove modules with field power applied.

Step One: With latch in "locked" position, align connectors on the side of each module and stack by pressing together. Click indicates lock is engaged.

Step Two: Attach field wiring using the removable terminal block or ZIPLink wiring system.

Check all latches are secure after modules are connected.

Step Three: To unstack modules, pull locking latch up into the unlocked position and then pull modules apart.

Use any QR Code reader application to display the module's product insert.

Module Configuration

Using the Hardware Configuration tool in the Productivity Suite programming software, drag and drop the P1-04ADL-2 module into the configuration.

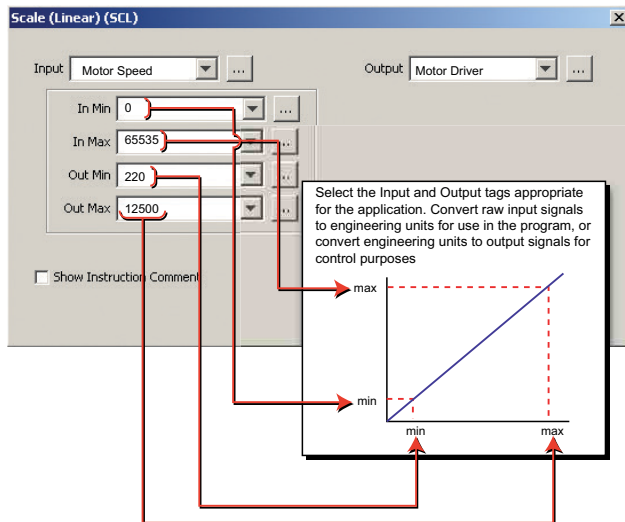

If desired, assign a *User Tagname* to each input point (channel) selected and to each *Status Bit* item.

Linear Scaling

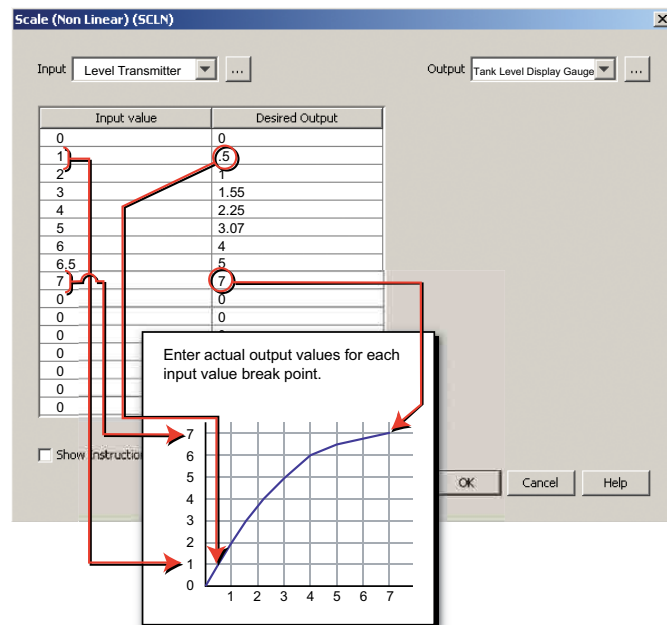

The Scale (Linear) function can be used to:

- Convert an application specific range to range which is native to the analog output module.
- Make other linear conversions in ranges appropriate to the application.

Non-Linear Scaling

The Scale (Non-Linear) function can be used for Non-Linear applications.
